Phoenix Handling Solutions Introduces...

Fibre-Film Stretch Wrap!

A revolutionary reinforced stretch film that is like nothing else you have seen before!

Legal Requirement

Other thinner films are available that can offer savings compared to 17mu, 20mu & 23mu standard stretch films.

However European legislation already exists that dictates pallets in transit must be able to withstand 1g of force and maintain integrity.

Would you trust your valuable cargo if it was wrapped in 10mu or 12mu film and the driver had to perform an emergency stop?

This isn't a legal requirement in the UK as yet but it could be soon.

Fibre-Film Stretch Wrap!

Fibre-film is designed to dramatically reduce the amount of stretch film you use to wrap your pallets, whilst increasing the load holding and stability of them. When applied by machine you can see up to a 60% reduction in the amount of film used compared to a 23mu standard cast machine film.

Fibre-film is the future of stretch film! Because of its exceptional high strength characteristics and money saving benefits Fibre-film will replace the old style stretch film in the UK within a very short space of time.

In machine form it can be stretched up to 300% and beyond with excellent puncture resistance as a result of the parallel fibres running through the film.

Fibre-film out performs any standard stretch film on the market for load holding and cost efficiency.

For a free no obligation demonstration to see how much Fibre-Film could save you please contact a sales representative on 0845 265 7570
