

HAMSON

Since 1985

Compact casepacker with integrated erector & sealer.

The Hamson Advantage

We move the case, not the product. The erected case is pulled smoothly down over the collated product—bottles are not dropped or lifted during the packing process.

The case is pulled down in tension, with the necks of the bottles providing a lead-in. This allows for tight packs, preventing bottles from rattling around inside the case.

1. Bottles arrive. Case erected above.

2. Case pullers lift up, grab flaps.

3. Case pulled down over bottles.

Features

- Up to 25 cases per minute.
- Fast, repeatable size changes, with simple change parts.
- All stainless steel or anodized aluminum construction.
- Case sealing with Dekka SS tape heads or Nordson ProBlue hot melt.
- Siemens or Allen Bradley PLC and HMI.
- SMC pneumatics.

Case size range
